

Over A\$15 million
given to Australian
and NZ charities
since 1984

FRAGILE X ASSOCIATION OF AUSTRALIA (FXAA)

Fragile X is the most common inherited cause of mental impairment and affects approximately one in 4,000 children worldwide. It appears in people of all ethnic, racial and socio-economic backgrounds and is second only to Down Syndrome as a cause of mental impairment.

People with Fragile X often have untapped potential including excellent memory skills which can enable them to learn a wide variety of tasks and gain greater independence.

The \$36,000 grant will be used to hold two day mobile workshops and clinics for health professionals and families in Perth, Townsville and Darwin and assist those living with Fragile X to achieve a better quality of life.

The Legacy
Lives On!
